## ROTARY CASCADE DRYER

Experience efficient and reliable drying with our Rotary Cascade Dryer, designed as a comprehensive drying system that includes an Air Heater, Dryer Inlet Hood, Exhaust Hood, Exhaust Air Fan & Ducting, and all essential controls.

## ROTARY CASCADE DRYER

## ROTARY ROASTER

Our Rotary Drum Roaster is your reliable choice for roasting a wide range of materials, including Coriander, Fennel (Saunf), Chili, Fenugreek Seeds, Bay Leaf, Cinnamon Leaf, Cumin, Sesame, Wheat, and more. This batch-type machine offers flexibility and precision in your roasting processes.

## ROTARY ROASTER

## BLENDER CUM ROASTER

Our U-shaped vessel is the ultimate solution for mixing and roasting powders and semi-wet materials, all in one versatile machine. With two distinct heating options and precise temperature control, it's the ideal choice for your production needs.

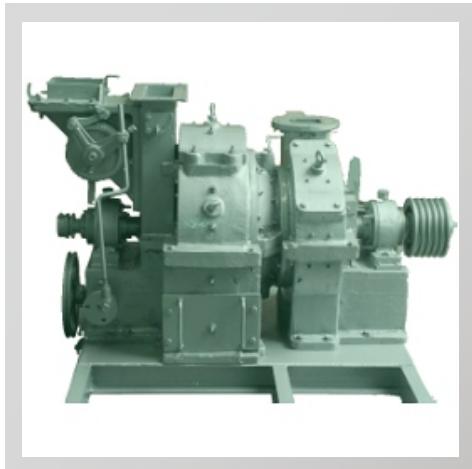

## BLENDER CUM ROASTER

## TRAY DRYER

Our Tray Dryer is a vital piece of equipment that finds its applications in various industries, including Food, Pharmaceutical, and Chemical. It's a reliable choice for conventional drying processes, delivering consistent and high-quality results.

## TRAY DRYER

## IMPEX PULVERISER

Our Impex Mill is a remarkable screenless pulverizer designed to handle the challenging task of grinding hard and brittle materials such as turmeric and minerals. It can achieve a fineness range of 100 to 300 Mesh BSS through a continuous impact process driven by rotating hammers against grinding liners.

## IMPEX PULVERISER

## MICRO PULVERISER

Our Micro Pulveriser is specifically engineered to excel in processing soft materials, including chemicals, dyestuffs, foodstuffs, pharmaceuticals, bulk drugs, and more, ensuring fine and precise grinding. As it is extensively employed for heat-sensitive materials like chemicals and bulk drugs, it comes equipped with a built-in water jacket that effectively regulates the temperature within the grinding chamber.

## MICRO PULVERISER

## AIR SWEPT MILL

Our Air Swept Mill is a high-performance screenless pulverizer designed to handle the grinding of brittle and fibrous materials, such as turmeric. It excels in achieving a good fineness range of 100 to 300 Mesh BSS through a continuous impact process facilitated by rotating hammers against grinding liners.

## AIR SWEPT MILL

## HAMMER MILL

This versatile machine is the ultimate solution for grinding a wide range of materials, including spices, foodstuffs, chemicals, ayurvedic herbals, minerals, and various other miscellaneous substances.

## HAMMER MILL

## PIN MILL

Our Rotary Drum Roaster is your reliable choice for roasting a wide range of materials, including Coriander, Fennel (Saunf), Chili, Fenugreek Seeds, Bay Leaf, Cinnamon Leaf, Cumin, Sesame, Wheat, and more. This batch-type machine offers flexibility and precision in your roasting processes.

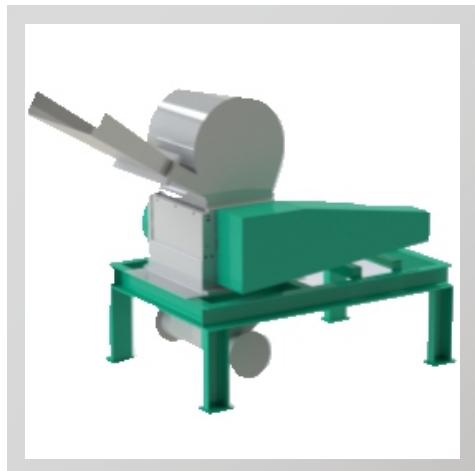

## PIN MILL

## ULTRAFINE MILL

Our Ultrafine Mill is a revolutionary screenless pulverizer designed for the ultrafine grinding of soft to medium-hard materials, producing super fine powder. It incorporates a built-in water jacket that effectively regulates the temperature within the machine chamber, ensuring optimal operating conditions.

## ULTRAFINE MILL

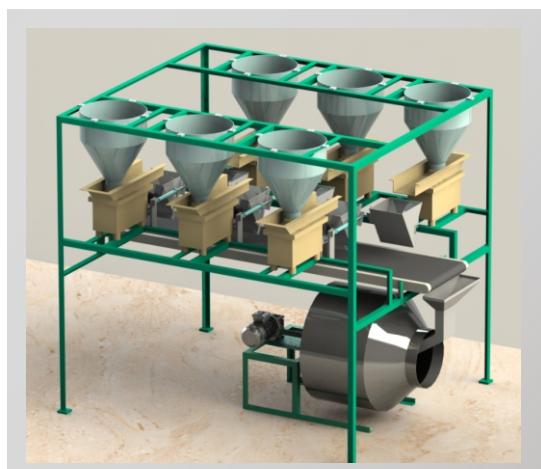

## CHOPPER MACHINE

Our Chopper is a specially designed machine for granulating and cutting a wide range of materials, including foodstuffs, agro products, and ayurvedic herbs. It efficiently transforms these materials into small pieces of the desired size, while minimizing the production of powder content. Notably, this machine operates without generating heat during the grinding process, preserving essential properties such as aroma, taste, flavor, and color.

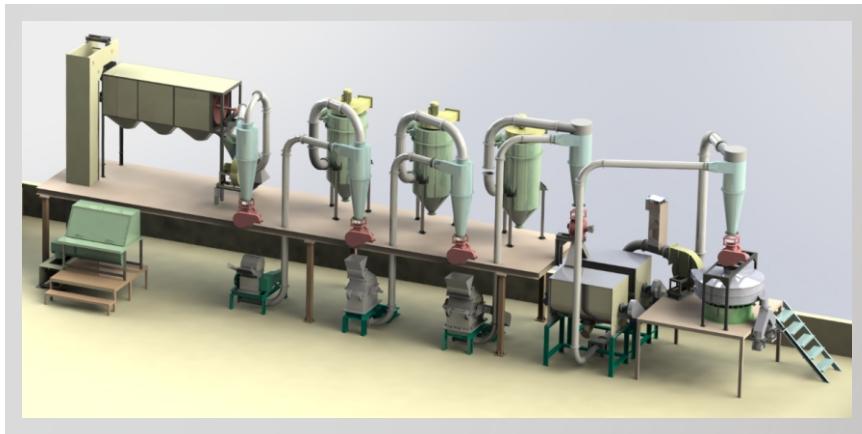

## CHOPPER MACHINE

## BATCHING SYSTEMS

Introducing the SS Electric Batching System – Your Perfect Companion for Precision Mixing and Blending!

## BATCHING SYSTEMS

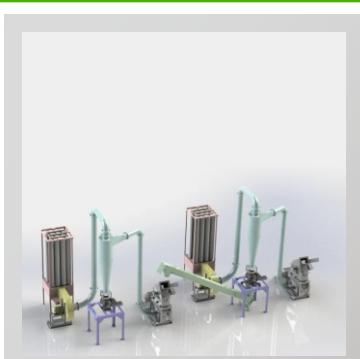

## BLENDING MACHINES

The Ribbon Blender is an indispensable addition to your industrial mixing arsenal. This high-performance blender features a U-shaped container, precision transmission parts, and ribbon agitating blades. The ribbon blades are designed with double or triple layers, enhancing the blending process. The outer screw gathers materials from the sides to the center, while the inner screw transmits the mixture from the center to the sides, creating a powerful convection mix.

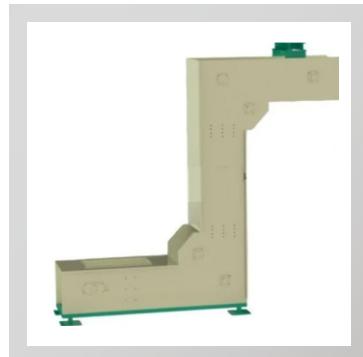

## GYRO SIEVE

The GYRO SIEVE is a versatile and dependable screening machine designed to meet your needs for high-quality screening and sieving. Crafted with a fine finish and built to standard quality, this product stands as a testament to precision engineering and craftsmanship. Whether you are looking for a new or second-hand screening solution, the GYRO SIEVE has you covered.
